

Design and Build

We have undertaken a number of design and build projects for our customers. Our well-equipped, state of the art design studio is fully able to find a solution - whatever your company's engineering requirements. If you have an idea you wish to convert into reality or if you wish to order one of these products then we are only too happy to provide our advice and recommendations.

Tramm Railer - TD18

The Rexquote TD18 is built with multi-functional attachments, these include a number of different cranes, man baskets and work platforms.

The PA90 shown here can carry four men plus tools in the basket and can be used for many purposes including tunnel inspections, working on overhead lines and gantries, painting canopies on railway stations and repairing brickwork. This work platform has a very large working area allowing more room for tools and has adjustable height and outreach. The TD18 travel function can be controlled from the platform whilst on the track. In emergency situations the basket can be recovered from the ground.

Picture 1 here is the road-railed cable drum carrier.
