

Front End Equipment

Rexquote's portfolio to date includes not just road-rail machines, but also specialist attachments, design and build projects and extra long reach equipment for the materials handling industry, inland waterway drainage and demolition of high-rise buildings.

We can take a standard machine from the OEM and adapt it for your particular application. Our design philosophy is based on an integrated engineering approach which starts at the initial machine design base. We then enhance the capabilities of the machine, maintaining its inherent stability as well as its hydraulic and electrical performance.

Rexquote gives you the opportunity to have machinery built to your requirements to fulfill your specific needs.
