

ACCESSRAILER

by REXQUOTE

Mecalac Access

□

The Mecalac Access is unrivalled in terms of versatility. It has no tail swing so is 100% operational in narrow configuration. The Mecalac is already well known for its manoeuvrability which has made it an industry favourite and this machine, uniquely designed to operate in the railway environment, provides both access to elevated structures for the purposes of repair, maintenance and construction and with the basket removed can perform lifting and digging operations. The Mecalac Access has huge flexibility and is every bit as powerful as the standard Roadrailer.

The 1.8 metre platform has a capacity of 225 kg and can lift two people and their tools safely to a working height of 6.6 metres with an outreach of 7.5 metres. Full control of the machine from the platform is possible from the console in the basket.

With safety and ease of use in mind the Mecalac Access has been designed to the high standards demanded by EN280. It is also T.U.V approved.
