

Trailers

Rail Trailers

The Rexquote trailer range includes a number of different sized flat bed trailers. These are manufactured with different weight capacities, with or without sides and with the option of specially made ramps, adjustable support legs and other accessories.

Rexquote trailers enable transport of goods and equipment to a worksite without the costly use of a train.

Each trailer is fitted with failsafe, spring applied parking brakes as standard with the option of proportional service braking system controlled by the foot pedal in the cab of the machine or via a joystick in the cab in the case of machines without OEM footbrake.

Sizes and load areas can be tailored to meet your specific requirements.

Each trailer is supplied with an accompanying tow bar painted safety red for high visibility on rail.

Innovative design ideas and projects to date include cable carrying trailers, personnel transporters and the addition of twist locks now means they have the ability to carry ISO containers.
